

ACQUISITION INTELLIGENCE / RESEARCH

Messy market evidence, ranked into decisions.

A representative acquisition-intelligence workflow that turns fragmented source evidence into normalized, reliability-screened, explainable candidates for operator review - without autonomous purchasing.

ACQUISITION INTELLIGENCE

Evidence before ranking.

- SOURCE
- EXTRACT
- NORMALIZE
- SCREEN
- RANK
- REVIEW

APPROVAL BOUNDARY

Ranked candidate remains operator-controlled.

ACQUISITION INTELLIGENCE / RESEARCH

Acquisition Intelligence & Decision Ranking

PROBLEM

Potential opportunities arrive with inconsistent prices, incomplete source evidence, uneven supplier reliability, and different levels of commercial risk. Ranking raw listings directly can hide weak evidence.

APPROACH

Capture source evidence first, normalize comparable fields, preserve provenance, screen reliability and survivability, calculate explainable decision signals, then route ranked candidates to human review and approval.

Result: a ranked candidate set with evidence and risk visible before action.

Illustrative values are synthetic demonstration data. No purchase, listing, or customer action is implied.

#1 65W USB-C charger

Marketplace source A

LANDED COST	\$18.40
EVIDENCE	HIGH
SOURCE RELIABILITY	84 / 100
MARGIN SIGNAL	38% proxy
SURVIVABILITY	88 / 100
	REVIEW FIRST

#2 7-port desk hub

Supplier source B

LANDED COST	\$24.10
EVIDENCE	HIGH
SOURCE RELIABILITY	80 / 100
MARGIN SIGNAL	31% proxy
SURVIVABILITY	82 / 100
	REVIEW

#3 Wireless mouse

Marketplace source C

LANDED COST	\$11.75
EVIDENCE	MEDIUM
SOURCE RELIABILITY	69 / 100
MARGIN SIGNAL	35% proxy
SURVIVABILITY	71 / 100
	VERIFY SOURCE

#4 Travel adapter

Supplier source D

LANDED COST	\$15.30
EVIDENCE	LOW
SOURCE RELIABILITY	58 / 100
MARGIN SIGNAL	29% proxy
SURVIVABILITY	55 / 100
	PARK
